Build apps that look and feel world-class.

This book shows you how to direct an AI coding assistant to build professional mobile apps for Android and iOS: the kind with instant steppers, live order tracking, story viewers and spotless checkout flows that users expect from the best apps in the world.

You will build four complete apps from one design system and one backend, a food delivery app, an online store, a social photo app and a 10-minute grocery app, plus a bonus streaming app for Android TV. Every app was built by real Claude Code sessions, and every screen in this full-color book is a real capture.

Inside you will learn:

- Directing Claude Code like a tech lead
- Expo, React Native and a shared design system
- Live tracking, carts, payments and returns
- Feeds, stories, likes and chat
- Performance, accessibility and testing
- Payment integration: Razorpay, Stripe, UPI
- Push, deep links, security and privacy
- A step-by-step guide to the app stores
- Bonus: Android TV, focus and the D-pad

Aadhavan Muthurengan is an automation and AI professional with more than 15 years of experience in the automotive industry, where Aadhavan has built in-house tools that transformed product development and validation.
