

Agents don't just answer. They do the work.

An AI agent reads, decides, uses tools and checks its own results. This book teaches you to build agents that are useful, safe and reliable, with Claude and the Claude Agent SDK.

You will build nine real agents for one small business, from a pantry helper to ShopMate, a back-office agent taken all the way to production. Every agent was run for real, and every result in the book was checked by code.

Inside you will learn:

- The agent loop, tools, and structured outputs
- Inbox, receipt, research and data agents
- A support desk with guardrails in code
- MCP servers and teams of agents
- Memory, sessions and evals
- Docker, scheduling, monitoring and costs
- Upgrades, model changes and maintenance
- Prompt injection and responsible agents

Aadhavan Muthurengan is an automation and AI professional with more than 15 years of experience in the automotive industry, where Aadhavan has built in-house tools that transformed product development and validation.

```
$ python run_daily.py
→ list_inbox
→ read_email 002
→ sales_report
→ support_queue
→ list_stock
✓ brief ready: 5 urgent
✓ 9 of 9 checks passed
```

BUILDING AI AGENTS WITH CLAUDE

FROM BEGINNER TO ADVANCED

A Beginner's Guide to Agents That Use Tools, Remember, and Get Real Work Done

9 REAL AGENTS • TESTED & EVALUATED • IDEA TO PRODUCTION
